

Most people want enough energy and vitality to live life to the full. We don't want to feel drained, exhausted and stressed out all the time. And why should we when being full of energy is our birthright. Energy is the fuel humans are designed to function on. We need regularly topped up, good quality energy for optimum health and wellbeing.

Energy is the fundamental building block of life. Everyone is familiar with energy and people describe energy in different ways. How many times have you said or heard others say 'I feel full of energy' or 'I am low in energy'? Have you heard people speak of being 'in good spirits' or 'having 'no energy left at all'? People speak of liking and disliking other people's energy or vibration. Energy is very much part of our common language.

My research over the past twenty-five years has involved the study of energy, holistic healthcare, humanistic psychology, ancient spiritual traditions, quantum physics and new paradigm medicine. I have travelled worldwide and experienced how people maintain health and achieve success in many different cultures. This led me to develop a powerful culturally diverse energy-based approach to balanced living.
